COMMENTS:

1. Also known as Potanopa Pond.
2. This pond was previously surveyed and classified in 1979. The classification changed from eutrophic in 1979 to mesotrophic in 1991. The major change in water quality was a halving of the chlorophyll level, from 14 mg/m³ in 1979 to 7 mg/m³ in 1991.
3. Town boat launch site; no parking available.
4. Blue-greens (50%) and greens (25%) were the dominant classes of wholewater plankton. The dominant genera were Merismopedia (50%) and Sphaerocystis (10%).

Potanipo Pond

Brookline

A map of Potanipo Pond in Brookline, Massachusetts, showing bird sightings recorded along its shoreline. The pond has an irregular shape with several inlets and peninsulas. Arrows indicate the flow of water: entering from the top left, exiting at the bottom right, and a smaller inlet on the upper right. Bird sightings are represented by letters (P, W, S, N, U, Y, F, B, X, S, L, E, M) placed along the shorelines. A scale bar at the bottom shows distances of 0 and 3 units.

A horizontal scale bar with vertical tick marks at 0, 0.1, 0.2, and 0.3. The unit 'Km' is centered below the bar.
